The President
The White House

The Honorable John Boehner
Speaker
U.S. House of Representatives

The Honorable Harry Reid
Majority Leader
United States Senate

cc: Vice-President Joseph Biden
The Honorable Eric Cantor, Majority Leader, U.S. House of Representatives
The Honorable Nancy Pelosi, Minority Leader, U. S. House of Representatives
The Honorable Mitch McConnell, Minority Leader, U.S. Senate

Mr. President and Leaders:

Among economists, policymakers, and the public, there is little dispute that our nation is following an unsustainable fiscal path. As representatives of high-tech and other industries, universities, and professional societies, we concur, and we therefore believe it is imperative that our government adopt policies to reduce the budget deficit and stabilize our national debt.

As you prepare legislation raising the debt limit, we urge you to ensure that the focus remains on allowing our nation's economy to grow and our citizens to prosper. Ultimately, the point of fiscal responsibility is to provide a better life for all Americans, especially future generations. Reducing spending and deficits is necessary for achieving long-term prosperity, but reductions in federal spending must be made wisely. They should not come at the expense of science and engineering research, which has provided our nation with extraordinary prosperity for at least six decades.

More than half of U.S. economic growth since World War II is traced to technological innovation and much of the innovation and advancement is attributed to scientific research supported by the federal government. Groundbreaking work in the medical field created vaccines and antitoxins. Similar work in other fields created lasers, the MRI, modern communications devices, GPS and the Internet. Few technologies in modern life do not have a direct or indirect connection to federally supported scientific research.

We are well aware that you face an enormous challenge. We urge you to take into consideration the short- and long-term economic benefits provided by predictable and sustained support for scientific research. Taking the

right steps will enable this generation to leave future generations a legacy not of excessive debt and limited prospects but of renewed leadership and economic opportunity.

Sincerely,

The Task Force on American Innovation
