### **Abstract**

To build the newly established MTE-P Hui we have taken this first year to learn about the goals and activities of each of our represented groups. We have identified commonalities among our programs that will help us promote the MTE-P Hui as a platform to mediate collaboration and foster actions toward achieving our shared vision. Our initial energies are focused in two areas—increasing access to college credit-bearing mathematics courses, and ramping up recruitment in initial teacher licensure STEM programs. In this presentation we will share efforts underway for statewide restructuring and aligning community college math courses at the MATH100 and lower levels. We will also share our recruitment plans for recasting the image of mathematics teacher education to an image that includes STEM teacher education and ethnomathematics. Feedback from the attendees will be encouraged!
